                                                                                                                                                                                                                                                                                                                                                                                                c78458 to c78599 represent polynucleotide and EST (expressed sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides have cytostatic activity to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. C78600 to C78987 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel PRO polypeptides and polynucleotides used i to target bioactive molecules to specific cells, cellular activities -

Database : SwissProt_39:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Recessive deafness.";
Nat. Genet. 27:59-63 (2001).

Nat. Genet. 27:59-63 (2001).

I Genet. 27:59-63 (2001).

I SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN (POTENTIAL).

I ALTERNATIVE PRODUCTS: 4 ISOFORMS; A (SHOWN HERE), B/C, D AND TRUNCATED/TAGS-12Y, ARE PRODUCED BY ALTERNATIVE SPICING.

I TISSUE SPECIFICITY: EXPRESSED IN MANY TISSUES. THE TRUNCATED ISOFORM IS FOUND AT INCREASED LEVELS IN SOME CARCINOMAS.

I SOFORM IS FOUND AT INCREASED LEVELS IN SOME CARCINOMAS.

I DISEASE: DEFECTS IN TMPRESS ARE A CAUSE OF TWO FORMS OF AUTOSOMAL NEUROSENSORY CHILDHOOD-ONSET FORMS OF DEAFNESS, DENB8 AND DFNB10.
